Fiberglass batt cavity insulation

Wood stud framing with code-required lateral bracing not shown

Taped insulation joints

Atlas EnergyShield® CGF (shown) or EnergyShield® polyisocyanurate continuous insulation applied directly to wood stud framing

Wood, fiber cement, or vinyl siding on 1" x 3" wood furring strips

Flashin

Atlas ThermalStar® X-Grade® EPS rigid continuous insulation

Note: Approved lateral bracing methods such as 1" x 4" wood let-in-bracing, metal strap cross bracing, inset shear panels and structural sheathing at corners and at regular intervals must be used when polyiso foam is applied directly to wood stud framing. Consult architect, engineer, local code and code official for most appropriate solution.

Note: Example illustrations are for reference only to graphically depict location of Atlas manufactured materials in relationship to other materials in a wall assembly. The images are not intended for construction documentation. A registered professional must review for accuracy and approve fitness for intended use.
