**WOOD FRAME**

EnergyShield® CGF Insulated Sheathing, WRB Wrap, Siding

- Flashing
- EnergyShield® CGF (shown) or EnergyShield® polyisocyanurate continuous insulation applied directly to wood stud framing
- Wood, fiber cement or vinyl siding
- Fiberglass batt cavity insulation
- Moisture/air/vapor barrier as required
- Wood stud framing with code-required lateral bracing not shown
- Atlas ThermalStar® X-Grade® EPS rigid continuous insulation

**Note:** Approved lateral bracing methods such as 1" x 4" wood let-in-bracing, metal strap cross bracing, inset shear panels and structural sheathing at corners and at regular intervals must be used when polyiso foam is applied directly to wood stud framing. Consult architect, engineer, local code and code official for most appropriate solution.
