TO: Atlanta Sales, Commercial Field Sales, Regional Managers, Plant Managers and Account Executives		TB-12 10.26.2017
FROM: Director, Technical Services, Roof and Wall Insulation Division	*UPDATED	
SUBJECT: Storage Recommendations for Atlas ACFoam [®] and EnergyShield [®] Products	PAGES SUPERSEDES EXISTING DOCUM	

Factory applied packaging is intended only for protection during transit. When stored outdoors or on the job site, the insulation should be stacked on pallets at least three inches above ground level and completely covered with a weatherproof covering such as a tarpaulin. The temporary factory-applied packaging should be slit or removed to prevent accumulation of condensation. Roof insulation which has become wet or damaged should be removed and replaced with solid, dry insulation, of the same type.

For additional storage and handling recommendations, see **PIMA Technical Bulletin #109**.
