

Built to Last, Insulated to Perform

EnergyShield® delivers durable, cost-effective thermal protection for harsh agricultural environments keeping buildings performing at peak efficiency year after year.

FOR AGRICULTURAL BUILDINGS APPLICATIONS

Built to Last. Engineered for durability with a 25 psi foam core and tough facers that resist wear and can be easily cleaned – ideal for demanding agricultural environments.

Top-Tier Thermal Efficiency. A high R-value of 6.5 per inch delivers strong thermal performance in thinner walls while maintaining continuity, using less material, and supporting long-term energy savings.

Lightweight & Labor Friendly. Easy to handle, transport, and install on large-scale projects – saving time & effort on the jobsite across wide spans and long wall runs.

Sustainable by Design. Zero ODP, negligible GWP, and GREENGUARD Gold certified for healthier indoor air quality.

Condensation Control. The closed-cell foam structure resists moisture absorption and helps prevent condensation providing protection for livestock and equipment from dripping and corrosion.

Custom Lengths Available. Board lengths available up to 20-feet* – minimize seams, simplify installation, and support cleaner environments in large-scale wall assemblies.
