

# Performance Starts from Within

EnergyShield® CGF Pro is engineered to deliver resilient wall assemblies, thermal efficiency and design flexibility across a wide range of commercial applications.

**EnergyShield® CGF Pro**  
Continuous Wall Insulation

## COMMERCIAL APPLICATIONS

**Deliver More with Less.** Offering R-6 per inch, EnergyShield CGF Pro meets your required thermal performance with a thinner, more efficient wall profile.

**Durable and Resilient.** EnergyShield CGF Pro provides the jobsite toughness and NFPA 285 compliant fire performance required for commercial wall applications, including metal panel systems.

**Design Versatility.** Our patented coated glass facer technology supports design flexibility with permeability for improved vapor management. EnergyShield CGF Pro features a dark gray facer on one side, ideal for open joint rainscreen applications.

**Environmentally Friendly.** EnergyShield CGF Pro is responsibly manufactured without PFAs or ozone-depleting blowing agents – no CFCs, HFCs, HFOs, or HCFCs – maintaining optimal insulating properties while leaving a lower carbon footprint. EnergyShield CGF Pro is UL GREENGUARD Gold Certified, one of the industry's most stringent standards, contributing to healthier indoor air.

Learn more about how EnergyShield CGF Pro can help your next project.

EnergyShield CGF Pro has been an effective insulating component in assemblies across applications from luxury residences to the LAX International Concourse.
