

Boost Jobsite Efficiency. Cut Material Costs.

EnergyShield® XR multi-functional performance integrates water, air, vapor, and thermal control in one high-performance layer for faster installation and lower material costs.

FOR CAVITY WALL / MASONRY APPLICATIONS

Higher R-value per Inch. With an R-value of 6.5 per inch, EnergyShield® XR allows you to reduce wall thickness, enabling you to reduce or eliminate furring channels or shortening brick ties to lower overall material costs.

Nationwide Reach, Local Speed. With eight strategically located manufacturing plants across North America, we deliver to nearly any project within 500 miles, reducing lead times and carbon footprint.

Jobsite Efficiency. 4-in-1 solution provides thermal performance, weather resistance, air barrier, and vapor control in a single panel, helping you expedite installation, improve energy efficiency and potentially eliminate other redundant materials.

Easy to Install. Lightweight and easy to handle, with optional scoring for added installation flexibility.

Tested Fire Performance. NFPA 285 compliant for use in code-driven exterior wall assemblies.
