

# Efficient Performance.

EnergyShield® Ply Pro delivers continuous insulation and fire-retardant treated plywood in a single, nailable panel — so you get a code-ready, cladding-friendly substrate without the extra steps.

 **EnergyShield® Ply Pro**  
Continuous Wall Insulation

## COMMERCIAL APPLICATIONS

**Deliver More with Less.** EnergyShield Ply Pro is a high-performance Class A rated polyiso that helps meet your required thermal performance with a thinner, more efficient wall profile.

**Built for Efficiency.** With thermal insulation and an attachment layer all in one system, EnergyShield Ply Pro bonds two products in one panel, allowing for faster installation and labor savings.

**Application Versatility.** Our patented coated glass facer technology supports design flexibility with permeability for improved vapor management. The fire-retardant treated plywood nailable surface allows for mechanical attachments of most cladding systems for NFPA 285 compliance.

**Fit with Flexibility.** The high R-value provides a tight continuous insulation layer in a thin wall assembly with an attachment layer gapped for expansion.

**Learn more** about how EnergyShield Ply Pro can help your next project.

EnergyShield Ply Pro has been an effective component across applications the U.S., from The Hulman Center at Indiana State to the Cargill Corporation Headquarters in Wichita.
