

The Polyiso Advantage for Stucco

EnergyShield® polyiso insulation delivers high-performance walls you want and jobsite efficiency you need — using the same trusted stucco methods you already know.

 **EnergyShield® CGF**
Continuous Wall Insulation

 **EnergyShield® XR**
Continuous Insulation

FOR STUCCO APPLICATIONS

Stucco System Compatible. EnergyShield works with traditional one-coat and three-coat stucco assemblies and is widely recognized by major stucco manufacturers for use in code-compliant residential and commercial wall systems.

More R-Value in Less Thickness. Get higher thermal performance without thicker walls. A higher R-value per inch can help meet energy codes while maintaining slimmer wall assemblies.

Durable Where it Matters. The 25 psi foam core with tough facers helps reduce field damage and breakage, keeping boards intact from staging to finish.

Lightweight & Labor Friendly. Easy to handle, cut and install, EnergyShield is designed for jobsite efficiency with optional scoring for added flexibility.

No Learning Curve Required. Install methods stay the same as other rigid foam insulations so crews can keep using familiar techniques.
