

# EnergyShield® Continuous Wall Insulation SUSTAINABILITY

Our sustainability promise embodies a commitment to big change through continuous small improvements.

## Our Products

EnergyShield products help reduce energy use and fossil fuel consumption so that buildings operate more efficiently.

Our products have the lowest environmental impact versus alternative material competitors, as evaluated by ISO 14040/44 Life Cycle Assessments (LCAs).

EnergyShield is responsibly manufactured without PFAs or ozone-depleting blowing agents – no CFCs, HFCs, HFOs, or HCFCs – maintaining optimal insulating properties while leaving a lower carbon footprint.

## Our Planet

EnergyShield is UL GREENGUARD Gold Certified, scientifically proven to produce low chemical emissions, contributing to healthier and cleaner indoor air.

Our products are manufactured with zero Ozone Depletion Potential (ODP) and ultra-low Global Warming Potential (GWP) as defined by the EPA.

With 8 plants across North America, we can ship to almost any location in under 500 miles, reducing transportation-related emissions.

## Our People

Atlas embraces standards that prioritize safe environments for our employees, visitors and customers.

Atlas invests locally and nationally to contribute to the success and safety of our communities, customers and suppliers.

Our employees are our biggest asset – we invest in the training and development of our people for their continued success.
